

[OfficeJS](#) has been presented by Nayu Software Technology at [TechCrunch 2013](#) “Red Web” Conference in Shanghai the 19th of November, 2013. TechCrunch is a world-wide leading technology media, dedicated to obsessively profiling startups, reviewing new Internet products, and breaking tech news. “Red Web” Conference gathered up international and Chinese entrepreneurs and medias to discuss the latest trends of global Internet industry, find the right direction, seize the opportunity, promote products and increase influences and expand businesses. During the conference, we demonstrated the world's first independent Enterprise Appstore of HTML5 applications – Office JS.com to offer business applications based on the innovative technology [jIO](#), invested by Nexedi.

Get your business applications whenever you need

Flexibility and mobility are two most demanded characters of today's business service applications. How to access to your business application whenever you need, on all devices and all platforms? How to share your business data in real time, with different devices and different users' accounts? Using the technology jIO and based on open source [ERP5](#), OfficeJS business applications accelerate the transformation of your companies. Furthermore, OfficeJS the Appstore is a free platform for developers to show their business applications based on HTML5.
